

Dr. Andriy Moskalenko, Department of Materials, University of Oxford, UK.

I'm grateful indeed to the B. Verkin Institute for Low Temperature Physics and Engineering for the highest level of experimental science education provided by my research supervisor Prof Igor Yanson during my PhD studies. It allowed me to make major contributions in nanoscience projects of the world leading centres, like RIKEN (Japan), Universities of Bath, Cardiff, Imperial College London (UK). I highly value atmosphere of research community in this world known centre.
